## Monday Morning Update

Forbes [names](#) seven technologies that could change healthcare. Some IT-type technologies on the list: [PatientKeeper](#)'s mobile physician system, remote image access company [Hx Technologies](#), the [InnoCentive](#) research challenge site for scientists, and [Aethon](#)'s mobile robots for hospitals. The InnoCentive site sucked me in because it's got some interesting challenges posted, like Kraft's RFP for "technology for making bakeable cheese fillers for baked snack products."
